

Front-End Engineer

Job Specification React Experience: 3–7 years

Role overview

We are looking for a highly skilled Front-End Engineer with strong expertise in React (3 to 7 years) and hands-on experience integrating AI/LLM-powered features into web applications. The ideal candidate combines excellent UI engineering skills with the ability to work with modern AI frameworks, APIs, and prompt engineering techniques.

Key responsibilities

- Build high-performance web applications using React.
- Develop clean, semantic HTML5 and modern, responsive UI using CSS3 (Flexbox, Grid, mobile-first).
- Integrate LLM-based features such as:
 - Chatbots
 - Summarisation
 - Document understanding
 - AI-driven UI workflows
- Work with AI/ML engineers or backend teams to consume LLM APIs (REST, Web APIs, or microservices).
- Implement intelligent user experiences (autocomplete, conversational UI, AI hints, suggestions).
- Transform wireframes into production-quality front-end experiences.
- Optimise performance, scalability, and accessibility.
- Write reusable components and maintain code quality through reviews and testing.
- Stay current with emerging AI front-end patterns, frameworks, and tools.

Core skills & experience

- 3–7 years of professional front-end development with strong, production-level React (hooks, context, component composition).
- Solid JavaScript (ES modules, async/await, DOM APIs) and semantic HTML5 / modern CSS3.
- Responsive, mobile-first UI development with Flexbox and Grid.
- Consuming REST / Web APIs and microservices, with clear loading, error, and state handling.
- Component reusability, code reviews, and automated testing discipline.
- Performance, scalability, and accessibility (WCAG) best practices.

AI / LLM experience

- Hands-on integration of LLM-powered features into web applications.
- Familiarity with modern AI frameworks and prompt engineering techniques.
- Building conversational and assistive UX: chatbots, autocomplete, AI hints and suggestions.
- Collaborating with AI/ML and backend teams to design and consume LLM APIs.

Nice to have

- Experience with streaming responses and token-level UI updates.
- Familiarity with vector search / retrieval-augmented generation (RAG) front-ends.
- Exposure to design systems and component libraries.
- CI/CD and cloud hosting for front-end apps.

Soft skills

- Clear communication with product, design, and engineering teams.
- Ownership of features from wireframe through production and iteration.
- Curiosity and initiative in tracking the fast-moving AI front-end space.
